The meaning of songs, the importance of them to us, and how that knowledge translates to today’s world that we all share. Why does music affect us as human beings, how long has it been around, what purpose did/does it have? I believe we all absorb and gravitate towards sound because it is an important aspect to our being. I find sharing my experiences and perspective of music leads to great dialog about the self and the world we share. It knows no boundaries and continues to be the universal language.”

  Archaeological evidence suggests that as the Laurentide Ice Sheet receded 13,000 years ago, Indigenous peoples adapted to a new landscape in the Great Lakes area. The location of their settlements and the technology they created demonstrate a transition that evolved for thousands of years. In this seminar, discover how Indigenous peoples responded to drastic landscape changes in the Niagara region, and shifted from a hunter-gatherer economy to an agricultural economy over the course of 2000 years.
